R Manuals (使用手冊)

- <https://cran.csie.ntu.edu.tw/manuals.html>

The R Manuals
edited by the R Development Core Team.

The following manuals for R were created on Debian Linux and may differ from the manuals for Mac or Windows on platform-specific pages, but most parts of the manuals for each platform are part of the respective R installations. The manuals change with R, hence we provide versions for the most recent version for the patched release version (R-patched) and finally a version for the forthcoming R version that is still in development (R-devel).

Here they can be downloaded as PDF files, EPUB files, or directly browsed as HTML:

Manual	R-release	R-patched
An Introduction to R is based on the former "Notes on R", gives an introduction to the language and how to use R for doing statistical analysis and graphics.	HTML PDF EPUB	HTML PDF EPUB
R Data Import/Export describes the import and export facilities available either in R itself or via packages which are available from CRAN.	HTML PDF EPUB	HTML PDF EPUB
R Installation and Administration	HTML PDF EPUB	HTML PDF EPUB
Writing R Extensions covers how to create your own packages, write R help files, and the foreign language (C, C++, Fortran, ...) interfaces.	HTML PDF EPUB	HTML PDF EPUB
A draft of The R language definition documents the language <i>per se</i> , that is, the objects that it works on, and the details of the expression evaluation process, which are useful to know when programming R functions.		
R Internals : a guide to the internal structures of R and coding standards used by the core team working on R itself.		
The R Reference Index : contains all help files of the R standard and recommended packages in printable form. (9MB, approx. 3500 pages)		

Translations of manuals into other languages than English are available from the [contributed documentation](#) section (only a few translations are available).

This is an R Markdown document. Markdown is a simple formatting syntax for authoring HTML, PDF, and MS Word documents. For more details on using R Markdown see <http://rmarkdown.rstudio.com>.
When you click the Knit button a document will be generated that includes both content as well as the output of any embedded R code chunks within the document. You can embed an R code chunk like this:

```

```

Including Plots
You can also embed plots, for example:

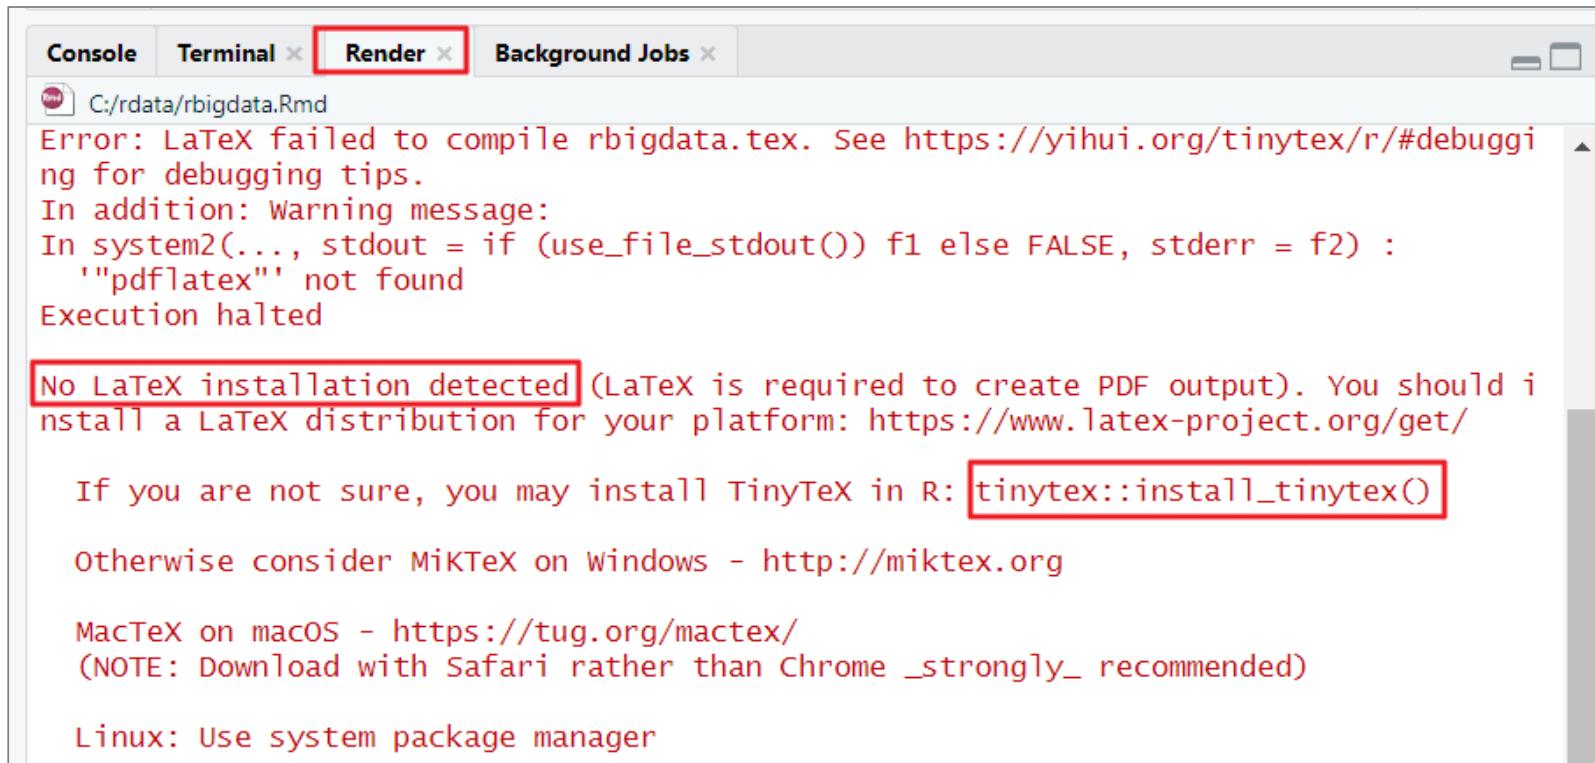

A scatter plot titled "Including Plots". The x-axis is labeled "temperature" and ranges from 0 to 350. The y-axis is labeled "pressure" and ranges from 0 to 800. The plot shows a positive correlation between temperature and pressure, with data points scattered across the range.

Note that the `echo = FALSE` parameter was added to the code chunk to prevent printing of the R code that generated the plot.

- 取出第145個值

物件命名原則

- R的大小寫有差異: *a* 與 *A* 是不同的物件。
- R 也保留一些物件與指令人稱, 如 c, C, T, F 等為保留字 (“reserved words”), 命名時避免重覆, 以免引起人類困擾。
- 物件名稱起始字元須以文字或 “.” (句點), 建議少用句點。
- 物件名稱起始字元不可為數字。
- 如果物件名稱以 “.” (句點) 為起始, 名稱第二個位置需為文字, 物件名稱其餘位置, 以文字 (A-Z或a-z), 數字 (0-9), 下底線 _ 皆可。
- 物件名稱中間不可有空格。

Google's R Style Guide

- <https://google.github.io/styleguide/Rguide.html>
- 函數使用 BigCamelCase

```
# Good
DoNothing <- function() {
  return(invisible(NULL))
}
```

- 不要使用 attach 函數
- 使用 **x <- 1**, 不要使用 x = 1
- = 用於函數之參數設定 plot(..., type = "b")
- 不要使用句點 Customer.Sales  改為 CustomerSales

Description

Draw a scatter plot with decorations such as axes and titles in the active graphics window.

Usage

```
## Default S3 method:  
plot(x, y = NULL, type = "p", xlim = NULL, ylim = NULL,  
      log = "", main = NULL, sub = NULL, xlab = NULL, ylab = NULL,

      panel.first = NULL, panel.last = NULL, asp = NA,  
      xgap.axis = NA, ygap.axis = NA,  
      ...)
```

Arguments

x, y

the `x` and `y` arguments provide the `x` and `y` coordinates for the plot. Any reasonable way of defining the coordinates is acceptable. See the function `xy.coords` for details. If supplied separately, they must be of the same length.

資料型別

資料型別

- 整數
- 數值
- 字串: 須使用 '台北市' 或 "台北市" 符號
- 邏輯值: 包括 TRUE, FALSE

R demo

數學運算

- R 即是計算機
 - log, exp
- 算數操作 (arithmetic operator)
 - +, -, *, /, ^, %% , %/%, %*%
- 關係比較操作 (relation/comparison operator)
 - ==, !=, <, <=, >, >=
- 邏輯操作(logical operator)
 - !, &, |

- x == "台北市"
- x == '台北市'
- y == 3.14

特殊數值

- R 可以正確表示無窮大數值:
 - $+\infty$ (正無窮大): `Inf`
 - $-\infty$ (負無窮大): `-Inf`
- `NaN`: 不是一個數值(數學上無定義,例:0/0)
- `NA`: 表示遺漏值(missing values)或(Not Available)
- `is.finite(1/3)` 判定是否為有限的
- `is.infinite(Inf)` 判定是否為無窮大
- `is.nan(x)` 判定是否為NaN
- `pi, letters, LETTERS, month.abb, month.name`

資料建立與輸入輸出

- `read.table`
- `read.csv`
- `write.table`
- `write.csv`

資料分析

- 步驟 1. 設定工作目錄
- 步驟 2. 建立資料檔
- 步驟 3. 汇入資料 `read.table`
- 步驟 4. 資料處理
- 步驟 5. 汇出資料

步驟 1. 設定工作目錄

```
> # 預設工作目錄 1  
> getwd()  
[1] "c:/Users/asus/Documents"  
  
>  
> # 設定工作目錄  
> workpath <- "c:/rdata"          先建立 C:\rdata 資料夾  
> setwd(workpath) 2  
  
>  
> # 已更改變為 "c:/rdata" 工作目錄  
> getwd()  
[1] "c:/rdata" 3
```

步驟 2. 準備資料檔 – 範例

- 日空氣品質指標(AQI) – 下載CSV
- <https://data.gov.tw/dataset/40507>

日空氣品質指標(AQI)

環保署將每日空氣品質監測站小時測值，經計算之日AQI公布。

遺漏值

步驟 3. 汇入資料 `read.table`

- `read.table` 函數將文字檔讀入R, 其回傳值是資料框(data.frame)
- 每一列表示一組觀測值(observation)
- 每直行表示一個變數 (variable)
- `read.table` 函數預設以空白做為區隔變數

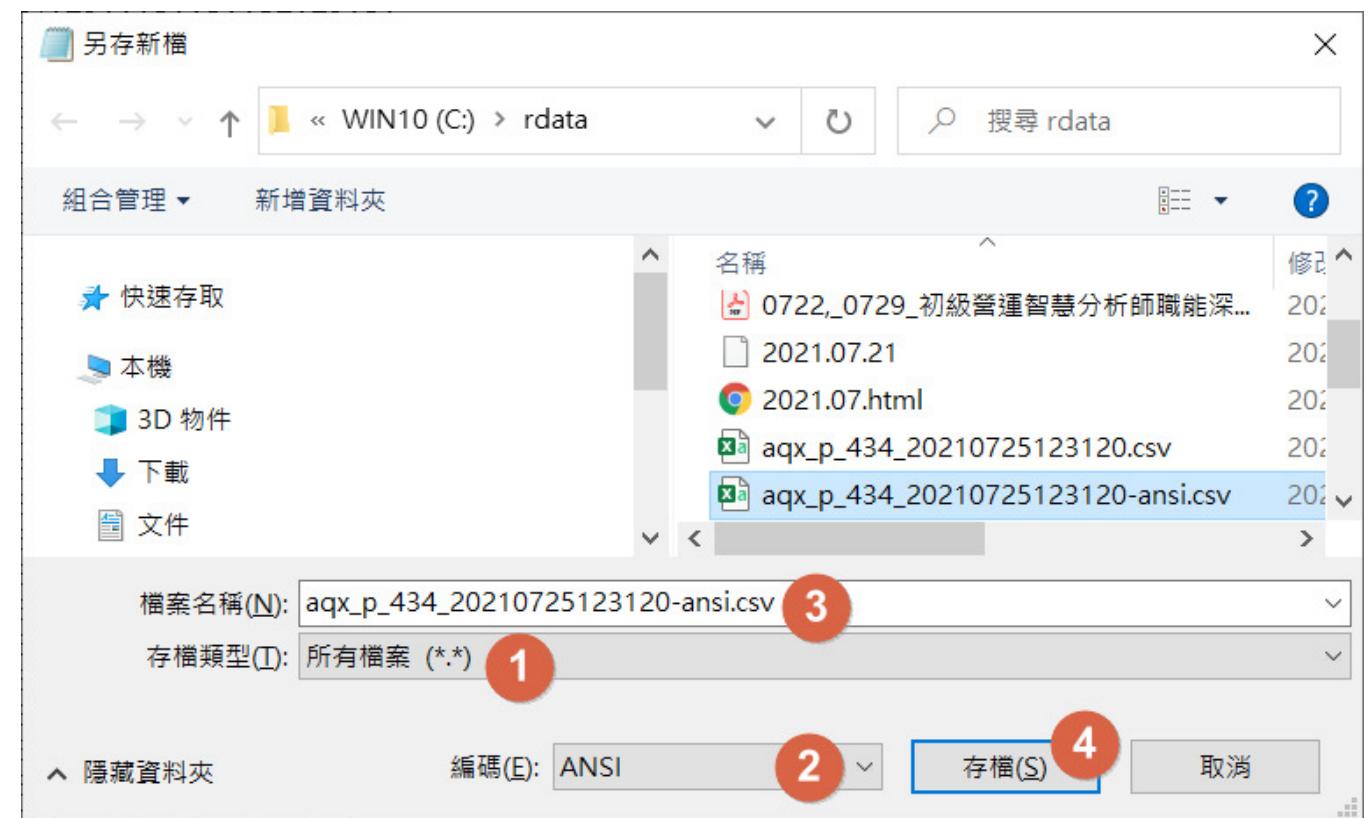

R-v3.x早期版本匯入 UTF-8 文字檔會有錯誤

```

> myfile <- "aqx_p_434_20210725123120.csv"
>
